This overhang beam is supported by a pin at $A$, a rocker at $B$, and has a uniform distributed load acting in between the supports. Crosssection dimensions of the beam is given. Compute:
(a)the flexural/bending stress at $C, D, E$ and $F$;
(b)compute the flexural/bending stress and draw the stress distribution at the left support ( $A$ ),
(c) from part (b), what are the maximum flexural tensile and compressive stresses at support $A$
(d) what are the maximum flexural tensile and compressive stresses that occurs throughout the entire span of the beam?

## Answers (refer to solutions for detail)

(a) $\sigma_{\mathrm{C}}=1,899 \mathrm{kPa}, \sigma_{\mathrm{D}}=741 \mathrm{kPa}, \sigma_{\mathrm{E}}=0, \sigma_{\mathrm{F}}=-3,118 \mathrm{kPa}$
(b) refer to solution
(c) $\sigma_{\text {MAX(T) }}=1,899 \mathrm{kPa}, \sigma_{\text {MAX }}(\mathrm{C})=-3,118 \mathrm{kPa}$
(d) $\sigma_{\text {MAX }(\mathrm{T})}=2,183 \mathrm{kPa}, \sigma_{\mathrm{MAX}(\mathrm{C})}=-3,118 \mathrm{kPa}$
